Subject: RE: New NOAA staff on the Duwamish

That's excellent! Happy to meet you – email address-wise at least – and interested in what you come up with!

There's a strip of tideland north of slip 6, adjacent to (and part of) the former Rhone Poulenc site that I believe has been of interest to the NRTC. I'm curious what the status is of that line of investigation (which would obviously involve the landowner). LDWG has collected data to add to the RI/FS dataset and refine areas/volumes for remediation. We'll be finishing design of the "upper reach" in late 2023, I expect, and it looks likely that this area will involve SOME kind of remedial action, which could be a go in 2024. If it is possible to have the pieces work together—not just there, but any sites in the upper 2 miles of the waterway—that would be great. The EPA project manager for that (RCRA) site is Janette Knittel.

There's also a site manager working on an engineering evaluation and cost analysis for cleanup at Terminal 108. Not sure if ALL of the shoreline is counted as "restored". The project manager is Anne Christopher (based in Portland).

If you want to talk with them, or with me, I'd be happy to join a meeting.

And Marla, we may be due for an EPA visit to the NRTC meetings. Are they still happening regularly on Wednesdays (virtually, now, of course)?

Subject: New NOAA staff on the Duwamish

Hi Elly and Julie

Hope you both are doing well! I wanted to introduce our new NOAA NRDA team members on the Duwamish. Jason Lehto was our restoration lead and left the program earlier this year. We are very fortunate to have Terill Hollweg stepping into this role along with Larissa Lee who will be focusing on outreach. Terill and Larissa have been working on a RFP to fund restoration projects on the Duwamish. Larissa would like to coordinate with Julie to help spread the word once we are ready to make a public announcement. I'm including their contact information below.

Cheers,

Marla
